

EXHAUST MANIFOLD REPAIR MYRA™ - 200 SERIES

ProMAXX® Myra™ tool was design-engineered to deliver speed, precision, and consistent reliability in the extraction of broken exhaust manifold mounting bolts- FAST! Compatible with Jeep/Dodge 3.7L & 4.7L V8 gasoline powered engines. Durango®, Dakota® and Jeep Cherokee.®

Key drivers:

- Now with replaceable bushings for even faster repairs
- Up to 50% savings in repair time
- 3.7L & 4.7L Jeep/Dodge V8 engine-compatible
- Eliminate risk of drilling into the coolant jackets of the cylinder head
- Remove broken screw extractors without removing the cylinder head
- Limited Lifetime Warranty
- Made in the USA.

The new Myra™ 200 Series, was engineered to cut repair time from 1-2 hours per stud to less than 15 minutes. Now with replaceable precision drill bushings, simply select the appropriate size Probushing™ and ProTractor™ combination and remove the damaged stud. Don't like to fool with a screw extractor? No problem! The 200 Series can now do extractor-less repairs! Pick up the optional accessories to your right and make the repair faster than ever, maintaining original factory threads and head specifications.

GET IT IN. GET IT DONE. GET IT OUT.
TAKE IT TO THE MAXX WITH PROMAXX®
